The accessibility is low since I removed the label to the select image button. My argument was that the button has the aria-label and there is not room for an additional label.
(Sorry about the swedish text in this picture: Select image, No image has been selected)

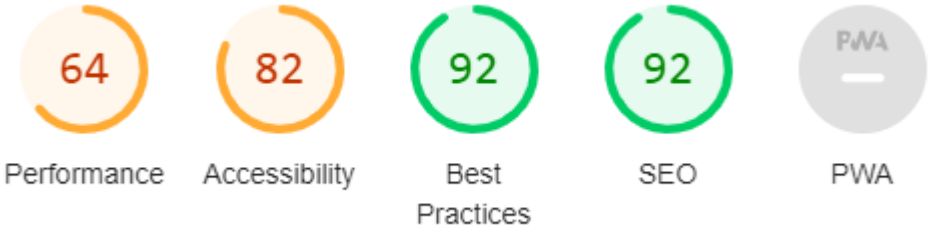
Edit Product, mobile:



The low accessibility value comes from a missing alt attribute on the current image preview. As I commented on the HTML test it comes from Boutique Ado project code, which I need more time to penetrate than I have available.
